ABOUT US

edc provides a full range of services in the areas of Mechanical, Electrical & Sustainable Engineering, Project Management and Construction Supervision. All our work is performed to the highest ethical standards using a unique approach for each project.

Progressive technologies such as 3D and Thermal Modelling, i.e. AutoCAD MEP 2010, IES and CFD, allows edc to produce accurate and efficient services designs to develop buildings of the future.

Comprehensive drawings and documentation are produced for each project, helping to ensure that construction runs smoothly and within budgets.

edc provide an optimised solution for Building Services which account for a significant proportion of the cost of modern buildings. Whilst increasingly complex and challenging, edc specialise in achieving reduced levels of energy usage and carbon consumption.

A Breath Of Fresh Air

OUR SECTORS

Commercial/Retail
Hotel & Leisure
Industrial
Residential
Educational
Health care/Hospitals
Sustainable
Pharmaceutical

OUR SERVICES

Mechanical Engineering
Electrical Engineering
Sustainable Engineering
Energy Analysis & Conservation Studies
Bream Assessors
Cost Monitoring, Analysis & Reporting
Instrumentation & Automation
Low Carbon Consultants
EPC/BER Assessors

“edc realise that each project is specific to its site conditions and end user requirements and we take pride in tailoring cost effective innovative engineering solutions for each of our clients projects.”
